Model Auditor — Model Review Report

DemoCo_DCF_Model_SYNTHETIC

Generated 03 November 2026, 23:20

Model health score

42 / 100

High risk

11 High, 7 Medium and 7 Low issues.

This report keeps computed findings from the audit engine apart from AI commentary. The original workbook was only read and has not been changed.

COMPUTED FINDINGS: AUDIT ENGINE

Executive summary

Model Auditor scanned 6 sheets and 345 formulas in DemoCo_DCF_Model_SYNTHETIC and raised 25 issues: 11 High, 7 Medium and 7 Low. The model health score is 42 of 100 (High risk). Every finding in this section is rule-based and repeatable. A flagged cell is a candidate for review and is not always an error.

Health score	High	Medium	Low	Total issues
42	11	7	7	25

Health score = 100 less 4 for each High issue, 1.5 for each Medium issue and 0.5 for each Low issue, with a floor of 0.

Model Auditor finds mechanical errors in formulas. It does not judge whether assumptions or the modelling approach are sensible.

This file held no saved Excel results, so calculated errors were worked out from the formulas.

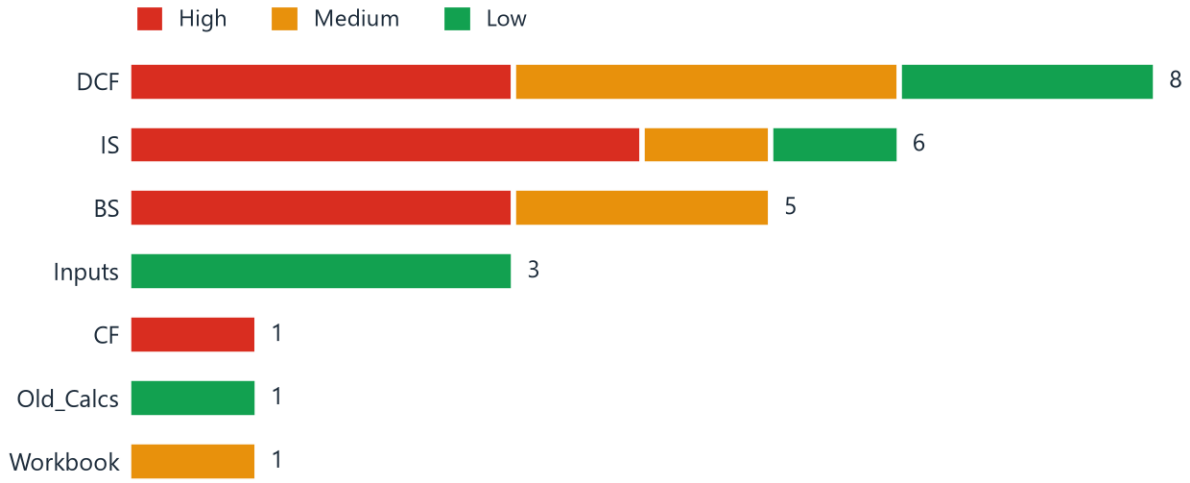

Tests run

Audit test	Issues found
Inconsistent formulas	9
Hardcoded constants	3
Plugs in formula rows	1
Error values	2
External links	1
Risky functions	2
Long or nested formulas	1
Hidden sheets and rows	2
Broken named ranges	1
Unused inputs	3

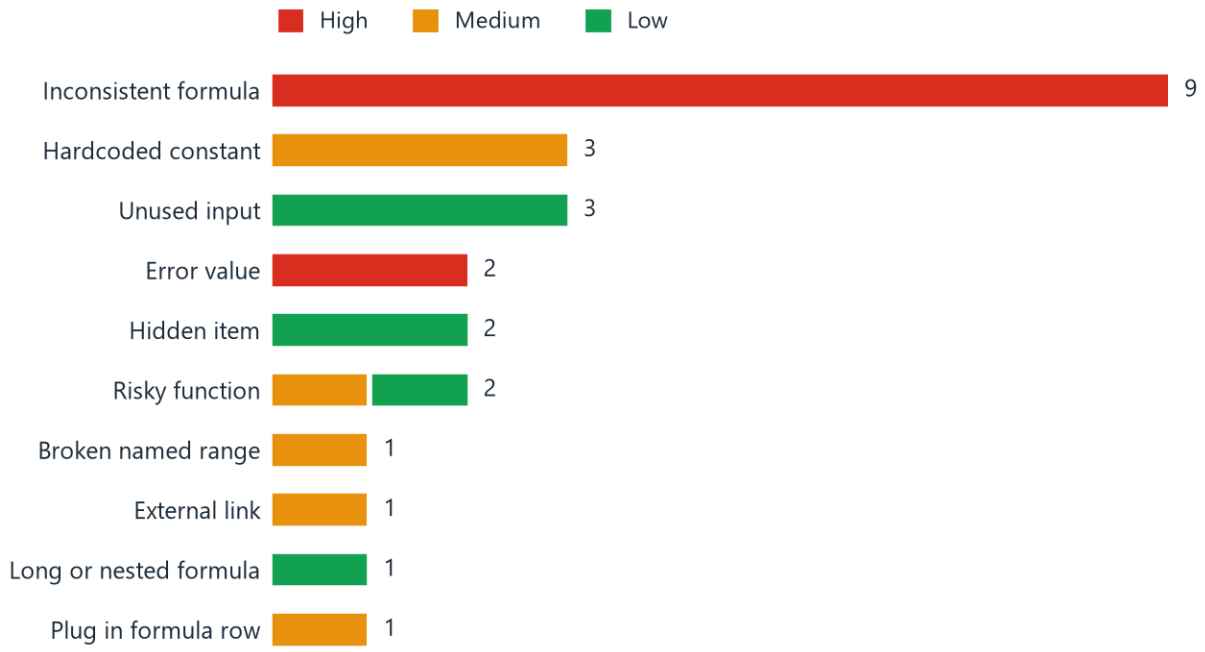

COMPUTED FINDINGS: AUDIT ENGINE

Issue charts

Issues by sheet

Issues by type

COMPUTED FINDINGS: AUDIT ENGINE

Top 10 issues

Ranked by computed severity, then by position in the workbook. The AI triage in the next section shows which of these are likely to be deliberate.

ID	Location	Severity	Issue type	Formula and explanation
ISS-001	IS!C5	High	Inconsistent formula	=Inputs!$C$20 Formula differs from the pattern used by 4 of 6 formulas in row 5, for example D5: =C5*(1+Inputs!D5)
ISS-002	IS!F5	High	Inconsistent formula	=E5*(1+Inputs!E5) Formula differs from the pattern used by 4 of 6 formulas in row 5, for example D5: =C5*(1+Inputs!D5)
ISS-003	IS!G8	High	Inconsistent formula	=-G5*Inputs!G7*1.18 Formula differs from the pattern used by 4 of 5 formulas in row 8, for example D8: =-D5*Inputs!D7
ISS-004	IS!D14	High	Inconsistent formula	=-MAX(0,D13-Inputs!$C$30)*Inputs!D13 Formula differs from the pattern used by 4 of 5 formulas in row 14, for example E14: =-MAX(0,E13)*Inputs!E13
ISS-005	BS!G10	High	Inconsistent formula	=G7+G9 Formula differs from the pattern used by 5 of 6 formulas in row 10, for example C10: =C8+C9
ISS-006	BS!D26	High	Inconsistent formula	=Inputs!$C$24 Formula differs from the pattern used by 4 of 5 formulas in row 26, for example E26: =D29
ISS-007	BS!D32	High	Inconsistent formula	=Inputs!$C$27 Formula differs from the pattern used by 4 of 5 formulas in row 32, for example E32: =D34
ISS-008	CF!G24	High	Error value	=G11/#REF! Formula contains #REF!: the cell it pointed to has been deleted.
ISS-009	DCF!I11	High	Inconsistent formula	=H11*(1+Inputs!$C$19)/(WACC-Inputs!$C$19) Formula differs from the pattern used by 5 of 6 formulas in row 11, for example D11: =SUM(D6:D10)
ISS-010	DCF!I12	High	Inconsistent formula	=H12 Formula differs from the pattern used by 5 of 6 formulas in row 12, for example D12: =1/(1+WACC)^D5

AI COMMENTARY: NOT COMPUTED, REQUIRES HUMAN REVIEW

AI triage results

The AI reviewed the flagged issues using only the data sent to it: 11 likely errors, 9 likely intentional and 5 needing review. Each issue id and cited cell was checked against the scan: 0 marked as Unverified AI claim, 0 sent but not answered.

ID	Location	AI verdict	Check	AI reasoning	AI suggested fix
ISS-001	IS!C5	Likely intentional	Verified	C5 is the FY2024A base-year revenue, linked to an input. Later years grow from the prior year, so the different formula is expected.	-
ISS-002	IS!F5	Needs review	Verified	F5 =E5*(1+Inputs!E5) follows the same structure as neighbours but references the prior-year growth column (E) instead of F. Inputs!F5 (0.1) is flagged unused, which suggests F5 should read column F.	=E5*(1+Inputs!F5)
ISS-003	IS!G8	Likely error	Verified	G8 multiplies opex by a hardcoded 1.18, which no other column in the row does. This inflates FY2028E operating expenses without any documented assumption.	=-G5*Inputs!G7
ISS-004	IS!D14	Likely intentional	Verified	The row label states tax in FY2025 is after brought-forward losses, so D14 deliberately deducts the loss balance. Later years use the plain formula.	-
ISS-005	BS!G10	Likely error	Verified	G10 total assets sums G7+G9, omitting G8, whereas every other column sums rows 8 and 9. Total assets in FY2028E are misstated.	=G8+G9
ISS-006	BS!D26	Likely intentional	Verified	D26 is the first forecast year's opening PP&E, linked to the opening input. Later years roll forward from the prior closing balance.	-
ISS-007	BS!D32	Likely intentional	Verified	D32 is the first forecast year's opening debt, taken from the input. Later columns link to the prior closing debt.	-
ISS-008	CF!G24	Likely error	Verified	G24 divides by a deleted reference (#REF!). Neighbours divide CFO by IS row 9 (EBITDA), so the link was broken.	=G11/IS!G9
ISS-009	DCF!I11	Likely intentional	Verified	Column I is the Terminal column; the Gordon growth formula on final-year FCF is the standard terminal value calculation, as the row label notes.	-
ISS-010	DCF!I12	Needs review	Verified	Terminal discount factor set equal to the final-year factor (H12) is standard when discounting TV from the last forecast year. Confirm this matches the intended convention.	-

ID	Location	AI verdict	Check	AI reasoning	AI suggested fix
ISS-011	DCF!C27	Likely error	Verified	C27 divides by Inputs!C33, which is zero, producing #DIV/0!. Employee count is missing or wrongly referenced.	Populate Inputs!C33 with headcount, or wrap in IFERROR/IF(Inputs!$C$33=0,"n/a",...)
ISS-012	IS!G8	Likely error	Verified	Same cell as ISS-003: the hardcoded 1.18 uplift is undocumented and breaks row consistency. It belongs in an input cell if deliberate.	=-G5*Inputs!G7
ISS-013	BS!F7	Likely error	Verified	F7 is a typed 110 in an inventory row driven by COGS and inventory days. It will not respond to assumptions changes.	=-IS!F6*Inputs!F11/365
ISS-014	BS!D13:H13	Likely error	Verified	Other current liabilities are hardcoded at 5% of revenue across D13:H13. The ratio should sit in an input cell for transparency and sensitivity analysis.	Add an input for the % and use =IS!D5*Inputs!C[new]
ISS-015	DCF!C16	Likely error	Verified	OFFSET is volatile and obscures the range being summed. A plain SUM over the PV row is clearer and safer.	=SUM(D13:H13)
ISS-016	DCF!C24	Needs review	Verified	The peer multiple is deliberately pulled from Peer_Comps_2024.xlsx, but the external link may go stale or break. Decide whether to paste values with a source note.	Hardcode the multiple in Inputs with a dated source, or keep the link and document the file path.
ISS-017	DCF!C28	Likely intentional	Verified	Thresholds in a text commentary formula are presentation logic, not calculation drivers. Low risk, though thresholds could be moved to inputs.	-
ISS-018	Workbook!Old_Tax_Rate	Likely error	Verified	Old_Tax_Rate points to #REF! and is a leftover from a deleted range. It can cause errors if referenced anywhere.	Delete the named range via Name Manager.
ISS-019	Inputs!F5	Likely error	Verified	Inputs!F5 (FY2027E growth) is unused because IS!F5 reads column E instead. The 10% growth assumption is being ignored.	Fix IS!F5 to reference Inputs!F5.
ISS-020	Inputs!F11	Likely error	Verified	Inputs!F11 (inventory days) is unused because BS!F7 is a typed plug. Linking F7 to the input would use it.	Fix BS!F7 to =-IS!F6*Inputs!F11/365
ISS-021	Inputs!C32	Likely intentional	Verified	Labelled as a legacy USD/AED rate from an old version and unreferenced. Harmless clutter that could be removed.	-
ISS-022	IS!D20:H20	Likely intentional	Verified	The hidden row is labelled as an internal net margin check with consistent formulas. Acceptable, but consider unhiding for transparency.	-

ID	Location	AI verdict	Check	AI reasoning	AI suggested fix
ISS-023	DCF!C26	Needs review	Verified	TODAY() makes the valuation date float. Fine for a live tool, but a valuation should usually use a fixed date if discounting depends on it.	Replace with a fixed valuation date input if used in discounting.
ISS-024	DCF!C28	Likely intentional	Verified	Deep nesting is only for text commentary and works correctly. It is hard to maintain; a lookup table would be cleaner.	-
ISS-025	Old_Calcs!(whole sheet)	Needs review	Verified	Hidden sheet with 10 formulas; unknown whether any live cells depend on it or whether it is obsolete.	Check dependencies, then unhide, document, or delete.

AI review memo

Priority fixes: (1) BS!G10 omits row 8 from total assets, so the balance sheet is misstated in FY2028E. (2) IS!G8 applies an undocumented 1.18 uplift to opex. (3) IS!F5 points to the wrong growth column, leaving Inputs!F5 unused. (4) BS!F7 is a typed inventory plug that ignores Inputs!F11. (5) CF!G24 has a #REF! and DCF!C27 divides by zero. Next, replace OFFSET in DCF!C16, move the 0.05 liabilities ratio to inputs, and delete the broken Old_Tax_Rate name. Review the external link, TODAY() and the hidden Old_Calcs sheet. First-year opening balances, base-year links, tax losses and the terminal value column look deliberate.

Disclaimer
